

# COVERALL™

## TURTLESKIN® PROTECTIVE SUIT

ALL-IN-ONE  
PROTECTION  
FOR WATER JET  
OPERATORS.

**C**overAll™ is a full-coverage, waterproof suit that provides maximum protection for water jetters working with pressures up to 40,000 psi (2,760 bar). NLB is proud to offer this latest advance in water jet safety from the manufacturer of TurtleSkin® WaterArmor.

Designed for comfort and ease of use as well as protection, CoverAll has the features water jet operators need to work most effectively.

### FEATURES INCLUDE

- Full frontal coverage across the torso and down the legs
- Waterproof nylon shell goes on like rain gear
- Impact-resistant armor panels are light and easily removable
- Low-maintenance and easy to clean
- 6 sizes available to fit most operators

In addition to covering the torso and legs, the CoverAll suit provides arm protection, foot and shin protection (with optional WaterArmor gaiters) and new neck protection. The latter reduces the risk from a hose or fitting failure when the hose is thrown over the shoulder.

\* CoverAll™, WaterArmor™ and TurtleSkin® are trademarks of Warwick Mills.

Beneath a waterproof outer shell, operators can now have nearly full frontal protection.

**WATERPROOF OUTER SHELL**

CoverAll begins with a durable, waterproof shell of Cordura® nylon, coated to keep operators warm as well as dry. Inside it has the same WaterArmor protection that has been proven again and again in a wide range of water jet applications. The standard shell color is blue; safety orange is available as a special order.

The jacket and bunker-style pants can be quickly put on and quickly taken off, minimizing downtime. Reflective bands on the arms and legs can be combined with a high-visibility vest to meet Level 3 visibility requirements.

**WATERARMOR GAITERS**

Optional foot and ankle protection with a CoverAll suit is provided by WaterArmor gaiters. They have a rugged, non-stick polypropylene cover that stays clean while withstanding the rigors of water jetting.

**REMOVABLE BODY ARMOR PARTS**

CoverAll's armor panels, similar to the body armor used by the military and law enforcement, fit into pockets inside the nylon outer shell. The operator can adjust the groin and center torso panels to tailor the coverage and freedom of movement.

When the suit needs cleaning, simply remove the armor panels and throw the outer shell in the washing machine. Cleaning and repair can be done by a local service or at the TurtleSkin factory.

**CONTINUOUS COVERAGE**

Protection for the center opening zipper is in the bib area of the bunker pants, assuring the operator of full coverage. Neck protection, internal or external arm protection, and foot and shin protection can be integrated for maximum coverage.

**NEW: NECK PROTECTION**

The CoverAll suit includes neck protection not available with WaterArmor.

**PLAY IT SAFE**

WaterArmor garments cannot prevent all injuries from high-pressure water, even if worn properly. A person should NEVER intentionally become hit by a stream of high pressure water.

Always follow all recommended safety procedures, including wearing protective apparel with eye and ear protection. It is the user's responsibility to determine the proper personal protective equipment needed in each particular circumstance. All such equipment and apparel should always be used in strict accordance with the manufacturer's instructions.
